

STRAP-ON TEMPERATURE SENSOR TEP NTC 10-C

TEP NTC 10-C temperature sensor is designed for automatic HVAC systems to detect radiator temperatures.

Temperature is detected by a NTC sensor element with a nominal resistance of 10 k Ω at 25 °C.

Housing is made of heat-resistant plastic. The screw cover and terminal blocks tilted to 45° make an easy installation. Sensor is mounted on the pipe by means of an adjustable tie.
