

STRAP-ON TEMPERATURE SENSOR TEP KP 10

TEP KP 10 temperature sensor is designed for automatic HVAC systems to detect radiator temperatures.

Temperature is detected by a KP 10 sensor element with a nominal voltage of 2.98 at 25 °C.

Housing is made of heat-resistant plastic. The screw cover and terminal blocks tilted to 45° make an easy installation.

Sensor is mounted on the pipe by means of an adjustable tie.
